Twelve Years a Slave (1853) is a memoir and slave narrative by Solomon Northup, as told to and edited by David Wilson. Northup, a black man who was born free in New York, details his kidnapping in Washington, D.C. and subsequent sale into slavery. After having been kept in bondage for 12 years in Louisiana by various masters, Northup was able to write to friends and family in New York, who were in turn able to secure his release. Northup's account provides extensive details on the slave markets in Washington, D.C. and New Orleans and describes at length cotton and sugar cultivation on major plantations in Louisiana. This book details all the differences between an internal combustion engine vehicle & an electric vehicle. It explains in plain & simple English how engines work, where the fuels come from, what the difference is between different battery chemistries & the

difference is between different electric motor types along with how an electric vehicle actually works. With regard to electric cars & hybrids, what are the differences with the electric charging modes, the cables you need, the government grants & initiatives that are available & finally what sort of maintenance will be required with an electric vehicle. All costs are explained along with emission zones & what governmental policies are currently in place & those which are planned. Although written primarily for the UK, Europe, North America & Asia have also been included to allow this book to be relevant globally. In 1962, South Korea assembled just 1,100 new automobiles. By 1996, this total had soared to 2,812,714. What explains this remarkable growth? The answer is complex, and involves a combination of a supportive State, timely technology alliances, a skilled but historically low-paid workforce, aggressive pricing, savvy entrepreneurs, and fortuitous circumstances. Despite this amazing ascent, comparatively little

has been written about the Korean auto industry in English. In the first of a two-volume set, this 11-chapter book seeks to help fill this void by providing in-depth examinations of all six of Korea's automakers from their beginnings through 1996. Uniquely written from the perspective of industry analysts at the time (without knowledge of the Asian Fiscal Crisis), the book should prove informative to practitioners, scholars, and students interested in automotive history, international political economy, Asian studies, and more. Until the catastrophic economic crisis of the late 1990s, East Asia was perceived as a monolithic success story. But heady economic growth rates masked the most divided continent in the world - one half the most extraordinary developmental success story ever seen, the other half a paper tiger. Joe Studwell explores how policies ridiculed by economists created titans in Japan, Korea and Taiwan, and are now behind the rise of China, while the best advice the West could offer sold its allies in South-East Asia down the economic river. The first book to offer an Asia-wide deconstruction of success and failure in economic development,

Studwell's latest work is provocative and iconoclastic - and sobering reading for most of the world's developing countries.
