Whether it's practical DIY home-improvement tips, gadgets and digital technology, information on the newest cars or the latest breakthroughs in science -- PM is the ultimate guide to our high-tech lifestyle. Integrating the procedural and conceptual approaches of teaching an introductory accounting course, this reference illustrates the concepts that underpin the application of accounting theory. Utilizing the pedagogical philosophy of the concepts model, this study influences the proper order of topics as well as the teaching methods being practiced. Featuring financial extracts from listed companies and highlighting key definitions, this resource also includes updated Generally Accepted Accounting Practice statements as well as detailed exercises and examples. How should the law deal with the challenges of advancing biotechnology? This book is a philosophical and legal re-analysis. Essays on the role of the body in self-consciousness, showing that full-fledged, linguistic self-consciousness is built on a rich foundation of primitive, nonconceptual self-consciousness. These essays explore how the rich and sophisticated forms of self-consciousness with which we are most familiar—as philosophers, psychologists, and as ordinary, reflective individuals—depend on a complex underpinning that has been largely invisible to students of the self and self-consciousness. José Luis Bermúdez, extending the insights of his groundbreaking 1998 book, *The Paradox of Self-Consciousness*, argues that full-fledged, linguistic self-consciousness is built on a rich foundation of primitive, nonconceptual self-consciousness, and that these more primitive forms of self-consciousness persist in ways that frame self-conscious thought. They extend throughout the

animal kingdom, and some are present in newborn human infants. Bermúdez makes the case that these primitive forms of self-awareness can indeed be described as forms of self-consciousness, arguing that they share certain structural and epistemological features with full-fledged, linguistic self-consciousness. He offers accounts of certain important classes of states of nonconceptual content, including the self-specifying dimension of visual perception and the content of bodily awareness, considering how they represent the self. And he explores the general role of nonconceptual self-consciousness in our cognitive and affective lives, examining in several essays the relation between nonconceptual awareness of our bodies and what has been called our “sense of ownership” for our own bodies. Who owns the media and communications in Africa today and with what implications? The book elegantly answers this urgent question by unpacking multiple dimensions of media ownership through rare and authoritative perspectives, including both historical and contemporary digital developments. It traces the evolving forms of ownership of media and communications in specific African contexts, showing how they interact with broader changes in and outside the continent. The book also shows how Big Techs, such as Meta (formerly known as Facebook), are involved in a scramble for Africa’s digital ecosystem and how their advance brings both opportunities and concerns about ownership and control. The chapters analyse evolving forms of ownership and their implications on media concentration and democracy across Africa. The book offers a nuanced account of how media ownership structures are in some instances captured with an ever-growing and complex ecosystem that also has new opportunities for public interest media. Offering a significant representation of the trends and diversity of existing media systems, the book goes beyond the postcolonial geographical divisions of North and Sub-Saharan Africa to highlight common patterns and significant similarities and differences of communications ownerships between and within African countries. The contributors expose media and communications ownership patterns in Africa that are centralised and yet decentralising and in some cases, battling, resurging and globalising. This volume explores 25 case studies of fiscal measures that have been adopted successfully by governments in North America and Europe to

reduce environmental degradation. Each study lays out the implementation issues and problems faced, and compares the effectiveness of the measure against its expectations. The political implications are also discussed, and the text draws on common themes and lessons to be gained from the measures so far. The volume is divided into sections on energy, agriculture, air and water pollution, and waste management. The urgent demand for housing after World War I fueled a boom in residential construction that led to historic peaks in home ownership. Foreclosures at the time were rare, and when they did happen, lenders could quickly recoup their losses by selling into a strong market. But no mortgage system is equipped to deal with credit problems on the scale of the Great Depression. As foreclosures quintupled, it became clear that the mortgage system of the 1920s was not up to the task, and borrowers, lenders, and real estate professionals sought action at the federal level. Well Worth Saving tells the story of the disastrous housing market during the Great Depression and the extent to which an immensely popular New Deal relief program, the Home Owners' Loan Corporation (HOLC), was able to stem foreclosures by buying distressed mortgages from lenders and refinancing them. Drawing on historical records and modern statistical tools, Price Fishback, Jonathan Rose, and Kenneth Snowden investigate important unanswered questions to provide an unparalleled view of the mortgage loan industry throughout the 1920s and early '30s. Combining this with the stories of those involved, the book offers a clear understanding of the HOLC within the context of the housing market in which it operated, including an examination of how the incentives and behaviors at play throughout the crisis influenced the effectiveness of policy. More than eighty years after the start of the Great Depression, when politicians have called for similar programs to quell the current mortgage crisis, this accessible account of the Home Owners' Loan Corporation holds invaluable lessons for our own time. This volume is an examination of the origins, characteristics and performance of employee-owned firms. It focuses on firms that have converted to either partial or full employee ownership using recent institutional, fiscal and legal innovations. Based on five years of empirical research, this is a topical contribution to recent debates on the challenging nature of employment. A balance sheet of thirty years of revolutionary experiment, this work is a comprehensive analysis of the failure of the socialist transformation of Egypt during the regimes of Nasser and Sadat. Testing recent theories of the nature of the developing states and their relation both to indigenous class forces and to external pressures from advanced industrial societies, John Waterbury describes the limited but complex choices available to Egyptian policy-makers in their attempts to reconcile the goals of reform and capital accumulation.
